JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

N°. XXII.

A Drawing of some Utenfils, or Ornaments, taken from an old Indian Grave, at Cincinnati, County of Hamilton, and Territory of the United-States, North-west of the River Ohio, Auguft 30th 1794. By Colonel WINTHROP SARJENT. Communicated by BENJAMIN SMITH BARTON, M. D.

Explanations.

Figures.

1. A ftone or compofition, hard and ponderous; fuperficies finooth and regular, almoft as if finifhed in a turner's lathe—mixed colours of black and white, or grey.
2. Do. do. of verditer colour throughout.
3. A cryftalline fubftance, regularly wrought as the preceding figure, and of confiderable degree of transparency.
4. As figure 1.—Mixed black and yellow colours.
5. Probably a compofition, ponderous and of dark colour, like black glazed potter's ware—feems to have been hardened by the fun or fire, and unequally compreffed in the operation. Two views are prefented, better to fhew this effect.
6. A representation of the bill of fome bird, not now known in this country.
7. A regular circular figure of rufty black colour, tolerably well polifhed, and not unlike ebony in appearance, but much lefs ponderous; probably either of coal or a compofition:—No. 2, fhews a fegment of the fame—its exterior and interior dimenfions—the groove or place for a band: at

Explanations.

Figures.

- the dotted lines are perforations, about a line diameter, which it would seem were intended to secure it upon a large axis
8. Also a circular figure, yellowish colour—appears to have been hardened by the sun or fire, and glazed—probably for similar uses with the last described—a double number of small perforations, and its thickness three lines less.
 9. A piece of thin sheet-copper—Two perforations as described in the drawing—a roughness on the edge produced by mouldering in the grave.
 10. A piece of sheet or plate copper, which seems to have been wrought into an ornament for the hair: this, however, only conjecture: No. 1. shews the back and folding parts with four perforations.—No. 2. is intended to give an idea of the other side, which is swelled longitudinally into three pipes, or divisions. The remains of some smaller pipes enclosed and now almost mouldered away, seem to destroy the idea of its being originally meant as a mere hair-ornament.
 11. The two sides of a bone, with the hieroglyphicks on each.

N. B. Some isinglass, or talk, in regular figures—the greatest about thirty inches circumference, and a few pounds of very rich lead-ore, were found in the grave.
